

AE/RA Practice Effects by Agroecological Zone — Ethiopia

Proportion of positive effects on yield and soil health, by practice and zone
Numbers shown are illustrative placeholders. Replace with actual zone × practice × outcome values from your dataset.

Agroecological zone	Intercropping (no inputs)	Intercropping (with fertilizer)	Agroforestry	Green manure	Crop rotation
YIELD					
Tropics, highland; sub-humid with soil/terrain limitations n = 3,582 total effects	71% n=148	28% n=64	34% n=187	54% n=11	no data
Tropics, highland; sub-humid no soil/terrain limitations n = 2,201 total effects	83% n=92	18% n=39	29% n=143	no data	52% n=8
SOIL HEALTH					
Tropics, highland; sub-humid with soil/terrain limitations n = 3,582 total effects	no data	no data	68% n=44	79% n=18	no data
Tropics, highland; sub-humid no soil/terrain limitations n = 2,201 total effects	no data	no data	58% n=27	72% n=11	no data

Legend

Strong positive (>=75% of effects positive)	Moderate positive (60-74%)	Slight positive (50-59%)
Mostly negative (<50%)	Strongly negative (<35%)	No data available

Note: Numbers are illustrative placeholders. Replace with actual values from your dataset. 'No data' cells highlight evidence gaps and represent opportunities for future research.
